

## Techrete Invests €5 Million in U.K. Plant Expansion

Techrete, a leading manufacturer of architectural precast concrete in Ireland and the U.K., is investing €5 million in an extension to its U.K. works at Brigg. Work is now well advanced on the expansion that will cater for the company's increasing volume of business in the U.K.

The expansion will create more production space for conventional production, as well as housing a new

robotic plant to streamline the production of architectural concrete.

A key feature of the new plant will be a carousel system whereby steel moulds will travel to zones of specialisation. The additional production space is scheduled for completion in January 2004 with the carousel plan coming on stream by mid-year. The new building is constructed of Techrete's precast concrete sandwich panels, which provide a complete wall solution.
